

The State of Network Security

Osterman Research surveyed 400 security analysts at mid-sized and large organizations to uncover current security challenges from the inside out, from staffing priorities to the need for specialized roles.

SHARED PAIN POINTS

SECURITY TEAM SIZE DOESN'T SCALE

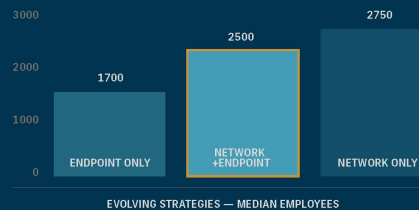

Large organizations have 30% more security staff despite averaging 10 times the number of employees of the midsize organizations surveyed.

SPECIALIZED ROLES DRIVE EFFICIENCY

SECURITY STRATEGIES EVOLVE WITH SIZE, SOPHISTICATION

Given that the median number of employees at organizations that use both endpoint and network security falls between the extremes, this suggests that evolving security strategies at larger organizations demonstrate a move away from reliance on only endpoint security.

Source: Osterman Research, Inc. survey of 400 security analysts in the United States at organizations with 1,000 or more employees. Conducted June-July 2018 and commissioned by ProtectWise.
